1. Method of a care for a nose and an oral cavity
2. Methods of modern antiseptics
3. Types of parental administering medications.
4. Technique of an implementation of a thermometry.
 1. Sources of an excitors of an in-hospital infection.
 2. Nursing unconsciousness' patients, signs of clinical death.
 3. Technique of lead through of a weighing.

Practical questions

1. Sanitary treatment of a sick with pediculosis

2. Method of execution of thermometry
3. Preparation of solutions chloride of lime and Chloraminum B for disinfection
4. Pre-treatment of the operating field
5. Sanitation of the oral cavity before the surgical attack
6. Ablution of the stomach by the thick probe
7. Method of the execution of the cleansing enema
8. Catheterization of the urinary bladder
9. Replacement of the bed linen at the seriously sick
10. Care of the skin and hairs of the patient
11. Giving of the bed-pan to the lying patient, disinfection of the bed-pan
12. Giving of the urinal to the lying patient, disinfection of the urinal
13. Douche of the lying patient (woman)
14. Complex prophylaxis of the bedsore, care out the patients with the bedsore
15. Feeding of the seriously sick by a nasogastric probe and Jean's syringe
16. Rules of handling with a dead body
17. Packing of the bandaged material and operated linen in the Shimelbush's box
18. Pre-sterilizing treatment of the surgical tools
19. Methods of disinfection of the surgical tools
20. Tests on quality of the pre-sterilizing treatment of the surgical tools
21. The order of the executing of the general cleaning in the operating-room
22. Pre- operation treatment of the hands by Spasokukotsky-Kochergin's method
23. Preparation of the solution Pervomur and the treatment of the hands before an operation this solution
24. The order of covering of the sterile table in the bandage-room
25. Organization of the care to the patients after with the anaerobic surgical infection

Head of chare of general surgery
Professor
